

URGENT NOTICE

Due to the serious water scarcity situation and the obligation to reduce consumption - 160 liters per person per day-, following the decision adopted by the Drought Committee, it is hereby notified (until further notice) that water pressure will be lowered during nighttime hours, starting from the night of **Wednesday, February 21st.**

This measure may result in users from different areas of the city, particularly those in the higher parts of the municipality, not having access to water supply, particularly affecting subscribers who do not have a cistern and have a direct connection to the potable water network.

These restrictions will be applied between 00:00 hours and 06:00 hours, although there will be some leeway due to the time required to carry out the manoeuvres.

This decision will take effect indefinitely until further notice and will be applicable throughout the Costa del Sol.

Initially, there will be no reduction in flow during Saturday nights. Each Saturday morning, the supply will be restored, and water pressure will not be lowered again until the early hours of Sunday to Monday, at 00:00 hours.

It is important to avoid unnecessary water storage and to consume responsibly in order to prevent these measures from becoming more severe in the future.

We apologize for any inconvenience caused, which may occur as a result of this exceptionally serious situation, beyond our control.
